

Installing the Citrix Client on a Mac

Installation Steps

1. After downloading the most recent version of the Client for Mac, open the downloaded .dmg file. The example below shows the installer saved to the Downloads folder. **Note:** the downloaded file name may be changed at any time. This example shows CitrixReceiver.dmg.

2. Open the downloaded installer. Again, this example shows CitrixReceiver.dmg, but the most recent installer may have a different name.

3. Double click the *Install Citrix Client* icon.

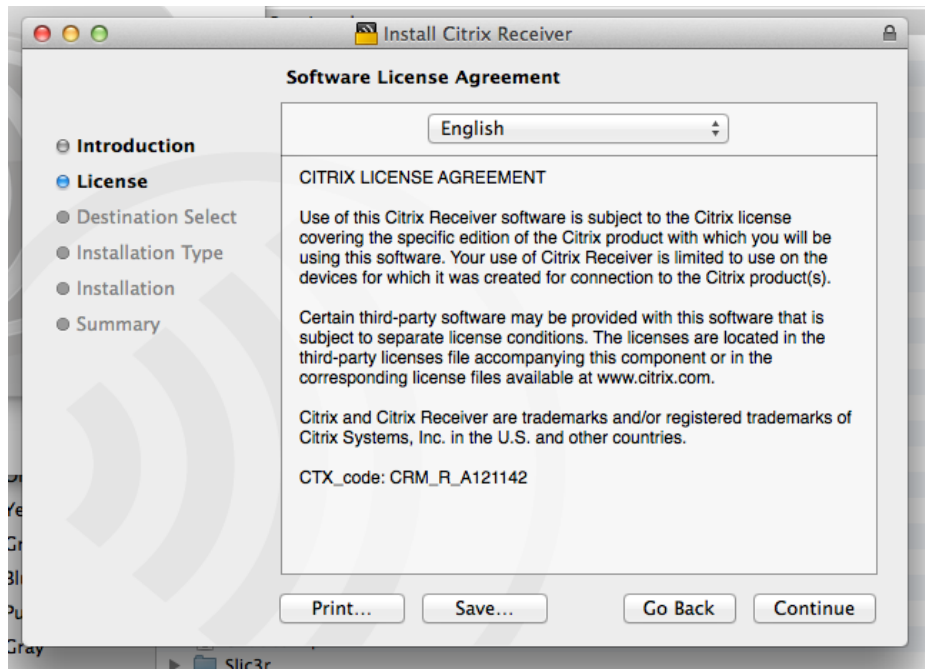

4. The installation begins as shown below:

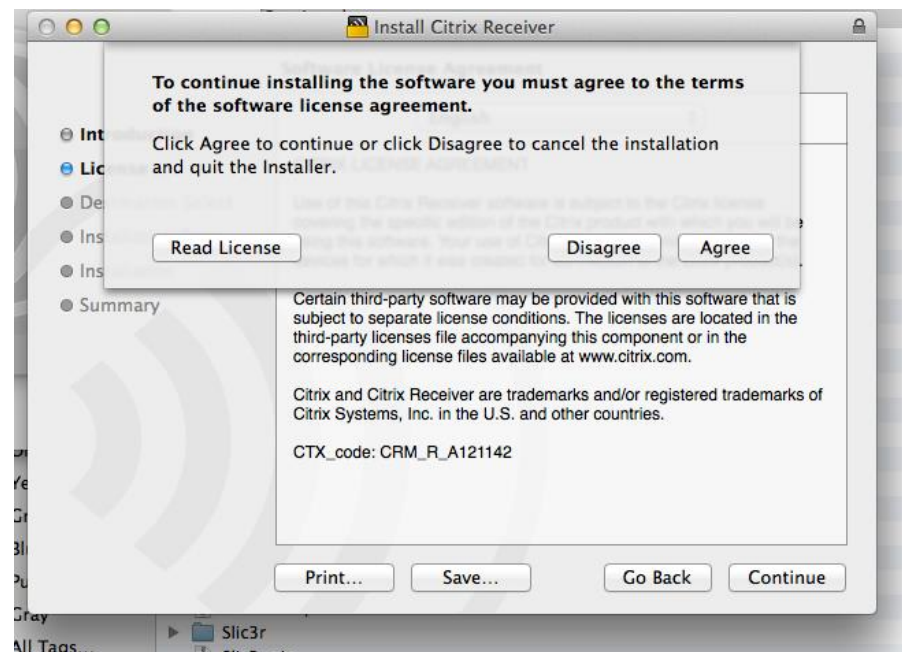

5. Click **Continue**.

6. The *Software License Agreement* appears:

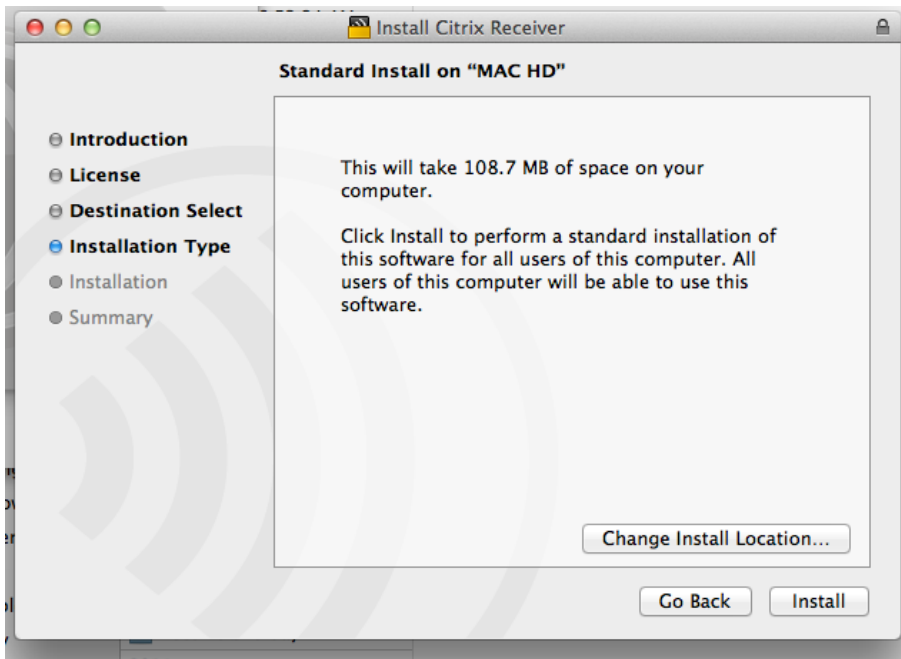

7. Click **Continue**.

8. Click *Agree* to agree to the license agreement.

9. The *Installation Type* appears:

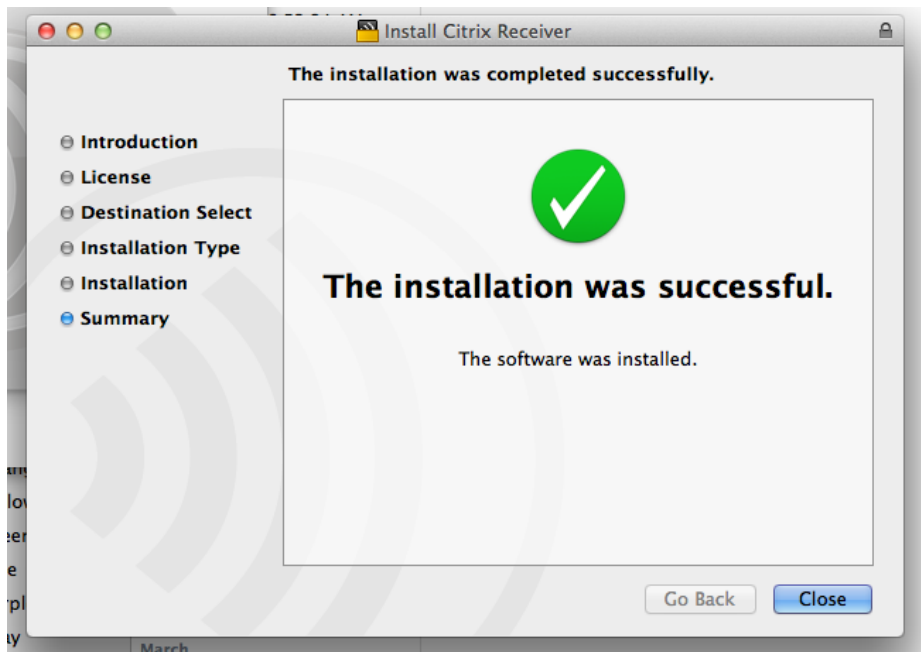

10. Click **Install**.

11. Provide your Mac password:

12. Click Close when the install is complete.

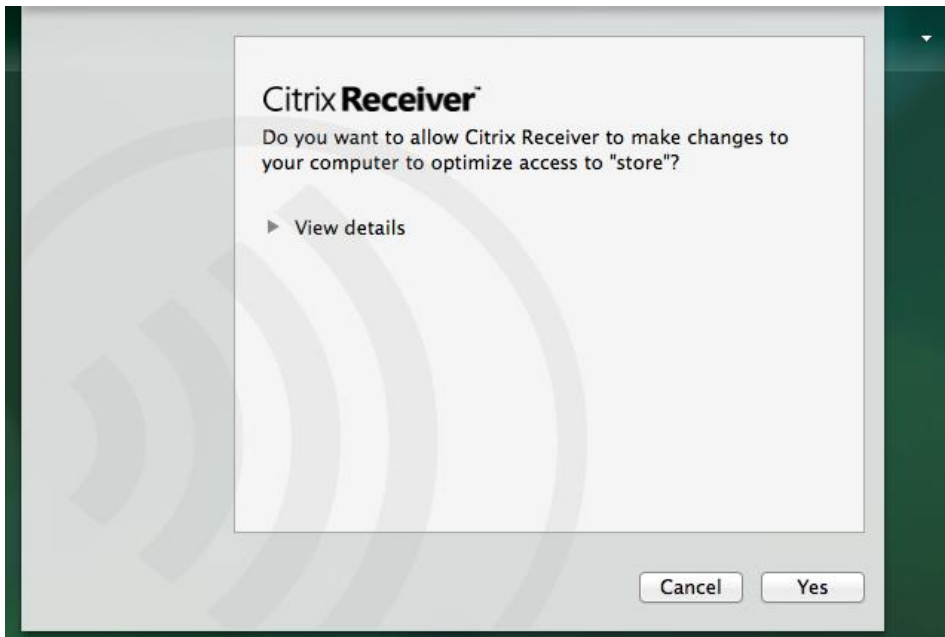

13. Right-click on the Citrix Workspace icon in at the top of your screen and select **Log On**.

14. Click [here](#) for the first-time setup instructions.

- a. Enter `https://webportal3.dot.state.mn.us` into the server address field and click **Next**.
- b. Enter your MnDOT AD credentials and click **Log On**.

15. You are asked one final question:

16. Click **Yes**.

The Citrix Client installation is complete and ready for use.
